

FAME to 834 Mapping (Non-COHS)

Note: FAME fields not mapped to an 834 element are available on the Supplemental file.

Note: See “834_Supplemental Data Scenarios” document for description of which types of HCP status code records are sent on the 834 and which are sent in the Supplemental file. This document is located on the DHS-OHC Internet: www.dhs.ca.gov/hipaa on the 834 Transaction page.

Highlighted areas represent changes from previous version

Appendix A MEDS Language Code to 834 Conversion

When an insured member's language is other than English it is required to report the member's language in the 834 transaction. There are two possible language code standards – NISO Z39.53 Language Codes and ISO 639 Language Codes. CA-DHS has chosen to use the ISO 639 Standard to report language codes.

The language description and associated codes used by the Medi-Cal Eligibility system do not always correlate to those codes defined in the ISO 639 Language Codes.

The LUI segment in the 834 transaction is used to report the insured member's language if the sponsor knows the member's language is other than English. Element LUI02 is the identification code defined in the ISO 639 Language Code table. If there is not an equivalent code between the Medi-Cal Code and the ISO 639 code then plain text description is placed in the LUI03 element.
